AI CHAT BOT QUESTIONS AND ANSWERS

Q Which glazing options offer the best solar protection? I don't want an antique table to fade.

A For stopping an antique table from fading, the best glazing choice is our solar control glass (this is designed to reduce solar/UV exposure compared with standard clear)... Also, all our glass types have Low-E (low emissivity) coating as standard, which helps reduce UV damage and therefore helps protect furnishings from fading.

Q Do you have a kerb width or drawing for your roof lanterns? I can't seem to find this on your website.

A Yes – we can provide the drawings for the roof lanterns, but they aren't shown directly on the main roof lanterns page. Please download our roof lanterns brochure (it includes the technical drawings/dimensions). Then, if you tell me the exact roof lantern size you are considering, I can help confirm the correct kerb/upstand dimension for that size.

Q Do you have the U values of your skylights by any chance?

A Yes – U-values can be provided, but they vary depending on the exact skylight product, glazing type and size. Could you tell me which skylight you mean? Once I have that, I can confirm the correct U-value for that specific unit.
